Green House Gas Emissions (GHG)

Reducing the impact of Green House Gas Emissions (GHG) from our production activity is a high priority for OSI. Here we respectfully present the results from our American facilities, operating as OSI Industries, LLC, for the most recent year available, 2016.

Reporting Year: January 01, 2016 – December 31, 2016

Definitions: Taken from the Green House Gas Protocol

Basis: Seven (7) Food Production facilities in the USA

Scope One – Direct Emissions

- Stationary Combustion Including Natural Gas and Fuel Oil – **5,526 Metric Tonne**
- Fugitive gasses – namely, CO₂ used for Product Chilling – **8,608 Metric Tonne**

Scope Two – Indirect Emissions

- Emissions incurred through the production of energy consumed at our facilities – **141,901 Metric Tonne**

Total GHG Emissions for 2016: 156, 083 Metric Tonne

GHG average per Facility: 22,297 Metric Tonne

Overall Intensity Metric for GHG: **0.50 Metric Tonne of GHG emitted per Metric Tonne of Food Product Produced**

Using 2012 as a baseline, OSI Industries' stated goal was to achieve a 5% reduction in GHG Emissions by 2020.

Baseline Intensity Metric for GHG: **0.763 Metric Tonne of GHG emitted per Metric Tonne of Food Product Production**

Goal for 2020: **5% reduction in GHG emissions intensity**

Comments:

- Significant changes have occurred in the products manufactured and conversion procedures and processes that skew the comparison over time, as more value-added (and thus, energy intense) products have been required by our customers since 2012. **If that had not been the case, the savings noted below may have been even higher.**
- Considering Intensity, the reduction in GHG emissions over the same period was **-34.4%**

Based on these numbers, we have exceeded our GHG emissions reduction goal a full three years earlier than our stated target.

About OSI

For more than 60 years, OSI Group, LLC has been a global leader in supplying value-added protein items and other food products to leading foodservice and retail brands. It is a privately held corporation with more than 65 facilities in 17 countries. The company's global headquarters is located outside of Chicago in Aurora, Illinois, USA.
